

RELEASE NOTES

Platform:	Qsonix
Release Version:	2.8
Release Build:	3.2.419.1
Release Date:	6/21/2010
Products Affected:	Q100, Q110, QJB110, Q105, QJB105, Q205, Q210

These release notes are provided for informational purposes only and are intended to describe changes, improvements and bug fixes that have been made in the indicated software release published by Qsonix. Where applicable, new features will be described in brief, additional documentation or details may be available on the Qsonix website.

GENERAL /New Features

Version 2.8 is considered a minor point release that includes several new features primarily relating to "High Resolution Video/GUI" improvements and also includes numerous bug fixes and system optimization.

Hi Resolution (1280x1024) video mode support:

Version 2.8 introduces a new video mode setting that is accessible from the System/Integration tab that allows users with Qsonix TS17 (17" touchscreen) models to take advantage of higher resolution graphics. When activated the Qsonix GUI will take advantage of the extra available resolution to display more information and graphics onscreen, including larger cover art, longer track titles and more details in all key menus and views offered by the system.

Miscellaneous changes & bug fixes:

- Changed System Idle time before maintenance cycle runs from 1 hour to 4 hours.
- The system auto-restart interval was adjusted in-conjunction with the maintenance cycle run,, the system will only restart every between 12am and 6am.
- Fixed issues relating to compressed media (full library compression files) meta-data and album art not always being updated properly after performing and "edit album" function.
- The "Search" function speed was dramatically improved/corrected due to a problem introduced in v2.7.
- Fixed bug with "Edit Cover" that would freeze if used when there were no "Network Places" defined in the network settings area.
- The "Import Media" file requestor will now properly show any support files in the folder/path that is being browsed in the lower section of the display.
- Corrected issue introduced in version 2.7 with the display of certain System Settings page titles such as "Information" that were cutoff on the screen.
- Updated various help text screens to remove certain characters that were not displayed properly.
- Removed support of the iPod Loading feature for new Q2XX models only. (This feature is now considered a legacy feature and will remain in place for existing users)

- The “Full Library” Compression option and related quality settings were moved to a new setting area (Network/Media Sharing) on new Q2XX models so that this feature can be preserved due to the removal of the associate “Ipod” feature mentioned above.
- Updated “Web Browser” make/model detection on system such that users will be properly redirected to either the IE interface or the iphone remote interface based on their browser. Now supports (I.E., Safari, Firefox, Opera, Chrome) desktop browsers.
- Corrected minor problem with the “Correcting File Durations” maintenance step, where under some circumstances it would repeat the same tracks upon subsequent maintenance operations.
