Where applicable, new features will be described in brief, additional documentation or details may be available on the Qsonix website.

GENERAL /New Features

Version 3.5d is considered minor bug fix only update

This release can be identified from the Tools/Information tab and will report v3.5d, build 3.5.27.2 in the version information.

Version 3.5d

Miscellaneous changes & bug fixes:

- Corrected issue that clears previously cached album when performing a system restore. This will correct isolated cases where inappropriate album art is displayed in the GUI after performing a system restore.
- Corrected bug related to deletion of import batches that prevented the deletion routine to run properly. Users can now safely delete old import batches from the Imported view.
- Updated network testing routine used to detect outside Internet availability. This check now confirms communications with a Qsonix controlled server vs. third party server.
- Corrected issue with the importation of certain legacy iTunes .m4a files that were not importing properly due to a tag writing issue.
- Certain changes/enhancements for Rock-Ola licensed products, including the addition of the Chrome Safari web browser remote interface and removal of legacy iPod loading features.
