

Ripstation 7000 Series

Best Metadata Available

Since metadata is the key to audio management, the Ripstation uses a combination of up to 6 metadata services including our premium metadata partner AMG (all music guide), the same used by Qsonix. This insures extremely accurate and consistent data for every CD and DVD ripped including high quality cover art. So whether you play it on an iPod or large screen Plasma you have the best resolution available.

Total Quality

Ripstation ensures you have an accurate, bit for bit and error free rip each and every time by deploying enhanced error checking.

Format support

The Ripstation series can rip to every audio file format supported by Qsonix, including Flac, WMA, MP3 and AAC and can rip multiple files at one time.

Support for Qsonix

The Ripstation team has worked closely with Qsonix to ensure full compatibility with their entire line of music server and nostalgic jukebox products. Each Ripstation will ship pre-configured to work seamlessly with the Qsonix Import system complete with all loading instructions to enable a standard, consistent delivery to your client at every stage.

Powerful and flexible, yet simple to use

Using Ripstation is simple – load the discs, choose CD or DVD, press start and select you target device and file format. At this point the Ripstation automation takes over and processes every disc providing detailed reports for the batch. Our industry experience also allows Ripstation to be configured for every possible output and requirement.
